

CS2720—Fall 2009

Assignment 3

Due: Nov 20, 2009 11:59 pm

- Your assignment will be marked on program correctness and readability (including comments).
 - Doxygen documentation should be used.
 - Write a Makefile which can be used to compile all programs in this assignment.
 - Each class should be implemented in its own `.h` and `.cc` files.
 - Use `const` member functions when appropriate.
1. Start with your solution (or one of the posted solutions) for Assignment 2.
 2. Write a test program with CppUnit (`AccountTest.cc`) to test the `Account` class. The test cases in this file should ensure that every line of code in the function is executed by some test cases, and all boundary conditions should be checked.
